Users can zoom to the level needed

Types of users

Administrators

Standard Users

Researchers

Different types of users have different accessibility levels.

- 
- First, all the users should log in with unique username/password
 - Without logging in to the system they are not allowed to see the relevant data regarding researches, forums, etc.

- The first time users can register for free.

Standard users are being registered by an automated system, while for **Researchers**, access is granted only after a review of credentials by project staff (**Administrators**).

Standard users

CAN

- create their own profiles and update them.
- upload videos and images onto the Geo Portal.
- share their experiences visually with the forum.
- search the database for information.
- create a shopping cart to add relevant information that can be accessed at any time

Researchers

CAN

- perform all the events which the 'Regular users' can perform
- draw a polygon covering project areas and then enter information about the data they have for the area and contact information.
- directly import Meta data from shape files imported through a semi-automated process.
- modify or update existing data.
- check stats of who has requested their data.

Information of users can be collected through forms and searched by others. Users will also be able to update their profiles, add CV's etc and reply to Job postings

Search

Engine

Users can search the database using any of the following keys through a GE-API available in the website.

- By entering coordinates (WGS84) or a specific location name
- By manipulating GE and clicking on an area
- By using a drop down list up to divisional level in range areas
- By uploading a .kml or .shp file in WGS84 projection
- By typing search keywords to generate a map if the requested information exists

For example if we take the above map of Sri Lanka ;

- When a user draws a polygon on the map
 - It will list the research information of that area.

(Date / Organization / Project Name)

NEW FORUM TOPICS

Group macro creation

Users can create polygons around areas they are interested in and Researchers can do the same and enter data/published info about their work in the area.

Polls can be conducted on important current issues

● Also.....

When someone searches for people working on electric fencing

- The map will come up to show all locations where this work is reported.
- People can click through to get details and download project reports etc

SECONDARY LINKS

• Researches

- Department of Wildlife Conservation, 2002 Survey of Elephant Density. Contact Director Research, www.DWLC.B
- Sri Lanka Wildlife Conservation Society, 2004 Survey of HEC. Contact www.SLWCS.org or info@slwcs.org
- Elephant Radio Collaring Study - Center for Conservation Research, Contact.....

Group macro creation

A search then indentifies the locations and existing data sources for the area of interest along with contact info and researchers can edit their own information.
