SL Fire Department Project

Discussion Guide

A. 1st Meetings with Fire Dept (2nd week of Oct)

1. Prepare digital and printed Map of Colombo and environs to discuss and demarcate 50sqKm to be included in project
2. Use Roads, Rail or Water boundaries rather than administrative boundaries only.
3. Finalise list of POI's to be collected
4. Discuss and place in order of priority functions of final system (within current project scope)

B. with Doran/Michele

1. look at the different colombo base map options and decide on what we will use (see method description below)
2. decide on overall time frame and then detailed monthly tasks and method of efficiently tracking this (see below).
3. Discuss draft contract with ICET (see text below) after discussing with Doran/Michele.
4. Do we (c2gis, aor, geo-xmf) need to sign a formal agreement? **Yes we do - they can be simple but we need agreements to cover our subcontractor relationship with you. I have these and can provide for review if you want.**

yes please send it -Chandeep 10/8/08 8:46 AM

1. Send 30% **(40%)** -I put 30% from first amount as we need to keep some money in reserve. The 10% will be paid to each of you at the end of project. Chandeep 10/8/08 8:26 AM payments to Doran/Michele -as USD cheque from wells fargo, San Diego, CA will be sent. Where to, in whose name? -I would appreciate an answer on this. Chandeep 10/8/08 8:45 AM For me, All One River GIS please, address: 634 Pulver Rd., Lake George, CO 80827 USA. At one time AOR was going to receive payment and disburse to me. If you are going to send separate checks you can send to geoXMF, 325 Lincoln Street, Longmont, CO 80501 -Doran Geise 10/11/08 6:42 AM

C. with ICET

1. Make sure first wire transfer is done
2. Discuss and Sign formal contract.

D. with new C2GIS staff member (Anushka)

1. Hired Anushka to work on the project (till end Dec).
2. begin discussion with Doran/Michele and their teams to assign responsibilities (in detail)

Task Tracking

I agree with Doran that Google Calendar is probably the best system. However any system will fail if each person working on this does not take a few minutes after working on a task or receiving an email about the project does not update the calendar with what they have done. I have tried similar systems with my staff and it doesn't work as they don't keep it updated.

This is VIEWABLE

To EDIT you have to login with your gmail account

DRAFT CONTRACT *-this is based on similar work I did as the proprietor of a website design and software development company from 1998-2003. Please see comments (in blue) where your input is MOST needed.*

Removed as file sent to ICET for comments after Doran's edits. -Chandeep 10/8/08 10:19 AM

METHOD

Base Data:

(Already available -Free/Pre-Purchased data)

1. TIFF Quickbird 1m resolution files of all of CMB and suburbs (approx 600mb each x 4 files). No Metadata. Co-od Sys Undefined.

This data would be most current but there won't be any street names and may be difficult for emergency responders to interpret in a response situation. What I meant was that we have this and it will just be used to georeference and make sure all the smaller roads etc are in the final output

which will be like images in the proposal/presentation-Chandeeep 10/8/08

8:27 AM When we have done this type of work before, we really need not only road names and address but also type of road such as primary access, dirt road, track, foot path. If we do not have those attributes, we create them (guess) and assign that criteria. --

Michele. Ok. Please tell me what exactly you need and how you need it and Anushka will send it to you. -Chandeeep 11/26/08 9:52 PM

2. Adobe Illustrator files of streets/rails in CMB. Converted to Ozi format and geo-referenced but need to be converted to vector and Kandawela/SL-UTM

What is the date of these files? Any idea of accuracy, i.e. are they complete? Are many roads missing? they are ok. We will need to check accuracy against the satellite imagery and ground truth. -Chandeeep 10/8/08 8:28 AM

3. roads and hospitals -polygon shp files. No Metadata. Co-od Sys undefined.

4. Garmin (mapsource) base map available in gdb format (convertible to mp)

5. Google Earth also has 0.6m imagery for the whole project area -can be automatically downloaded using <http://www.allallsoft.com/gmd> which we can purchase for \$30.

(commercially available)

1. Dialog/IWIS has a system for colombo (all classes of roads and some POI's).

see <http://www.iwsgis.com/satnav.php>

The current system has the base maps preloaded on a US\$1100 unit.

2. http://www.gis4less.com/catalog/index.php?cPath=1_4_152_127 has a set for \$3500. I have requested details. I will forward their email to you all. Although expensive it seems to be high resolution and quite accurate. Is it worth considering purchasing? -Chandeeep 10/8/08 8:48 AM

3. The university of Colombo is supposed to have a route planning system for colombo but it is not online

- http://www.ucsc.cmb.ac.lk/index.php?option=com_content&task=view&id=266&Itemid=165

Is it worth trying to work with any of them on this or just create our own base maps?

SUGGESTED SUMMARY ACTIONS

Task 1-3 (lowest cost, most beneficial option)

Get AI files for area, georeference using Google Earth and Quickbird imagery and control/ground points.

Hand digitize them (C2GIS) with direction from AOR into the master format needed by GEOXMF.

What are you proposing to hand digitize? What are you capturing?

hand digitize using a tablet PC the AI files once they are geo-referenced as I assume you will need a vector/shape file-Chandeeep 10/8/08 8:30 AM

When we were considering actually doing routing - where the path from Fire Station to Emergency Location would be built real-time - we needed a centerline vector coverage.

Now the important thing is the point locations of all the features you are going to collect in the field. I think if you have an accurate base map raster image with streets and street names then all we need to do is geo-reference it and we would use it as a backdrop to the

point coverage.-Doran Geise 10/11/08 6:33 AM Ok. What exactly then do you need us to do first? -Chandeep 11/26/08 9:53 PM

Collect POI's as per direction from FireDept and GeoXMF

What is the best way to share these files? www.rapidshare.com (500GB, 55Euro/1yr) or <http://www.4shared.com/> (70gb=70\$ for 1yr) -I would appreciate an answer on this. Chandeep 10/8/08 8:45 AM Looks reasonable to me. -Doran Geise 10/11/08 6:41 AM Ok - I will get the rapid share account and send you the details. -Chandeep 11/26/08 9:54 PM

Task 4-6

Send DVD or place files online for GeoXMF to do Task 4-6 (Euclidian Distance and EFRS functionality)

Task 7

Continues with C2GIS in lead.
